

Clients who Received DASA and MHD Services by Age

Operational Definition: Percentage of mental health outpatient service recipients who received Department of Alcohol and Substance Abuse Services (DASA) in the Fiscal Year by RSN and Statewide by Age Group.

Rationale for Use: Providing and facilitating access to both mental health and substance abuse treatment is necessary to promote recovery. Examining the number of youth, adults, and older adults who receive both substance abuse and mental health treatment provides an indication of how well these two service delivery systems are coordinated for different groups who have different needs. This indicator also provides an estimate of the number of youth, adults, and older adults who have co-occurring mental illness and substance abuse disorders.

Operational Measures: The number of children/youth (0-17), adult (18-59), and older adult (60+ years) mental health outpatient service recipients who also received DASA services at some point in time in the Fiscal Year divided by the total number of children/youth (0-17 years), adult (18-59 years), and older adult (60+ years) mental health outpatient service recipients in the same Fiscal Year.

Formulas:

$$\frac{\text{Number of mental health outpatient service recipients who received DASA services at any time during the Fiscal Year}}{\{0-17, 18-59, 60+ \text{ yrs}\}}$$

$$\text{Number of outpatient mental health service recipients in the Fiscal Year}$$
$$\{0-17, 18-5, 60+ \text{ yrs}\}$$

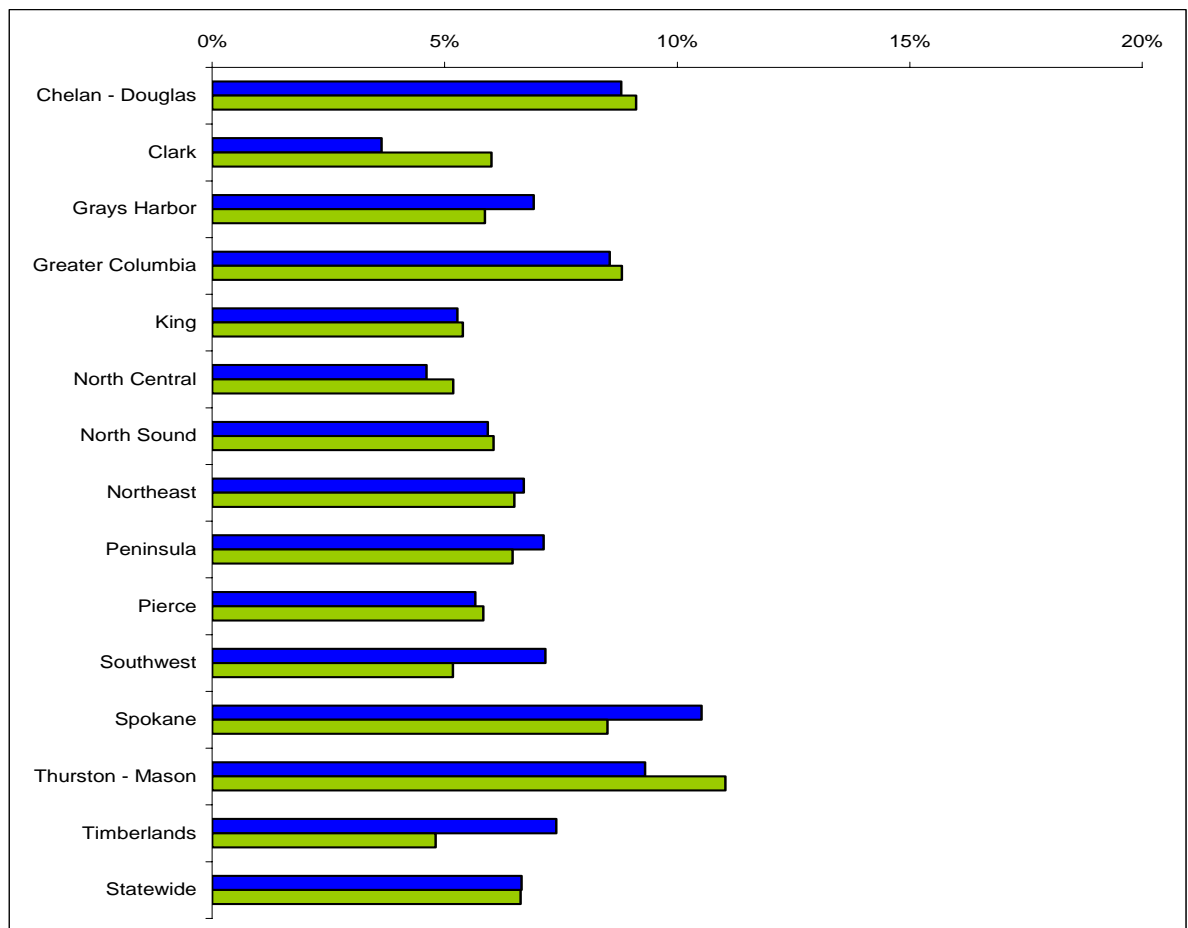

Discussion: These numbers are likely an underestimate of the true number of service recipients with co-occurring and substance abuse disorders. However, they do reflect the number of clients who received services from both MHD and DASA in Washington State. Adults represent the majority of those DASA and MHD co-serve, followed by children and youth.

Data Notes:

- ♦ The Research and Data Analysis (RDA) Branch of DSHS compiled this data. The specific data source is the Client Services Database (CSDB). Fiscal Year 2005 data was not available at the time of this report.
- ♦ Mental health outpatient service recipients include all clients who received any amount and type of outpatient mental health services (including residential, 24-hr crisis, and crisis hotline) in the Fiscal Year. RDA generated these counts.
- ♦ DASA services include: Detoxification, ADATSA Assessments, Residential Treatment, Outpatient Treatment, and Opiate Substitution Treatment
- ♦ RDA uses a slightly different method of assigning clients to RSNs than the Mental Health Division, which may result in a slightly different number of outpatient recipients by RSN.

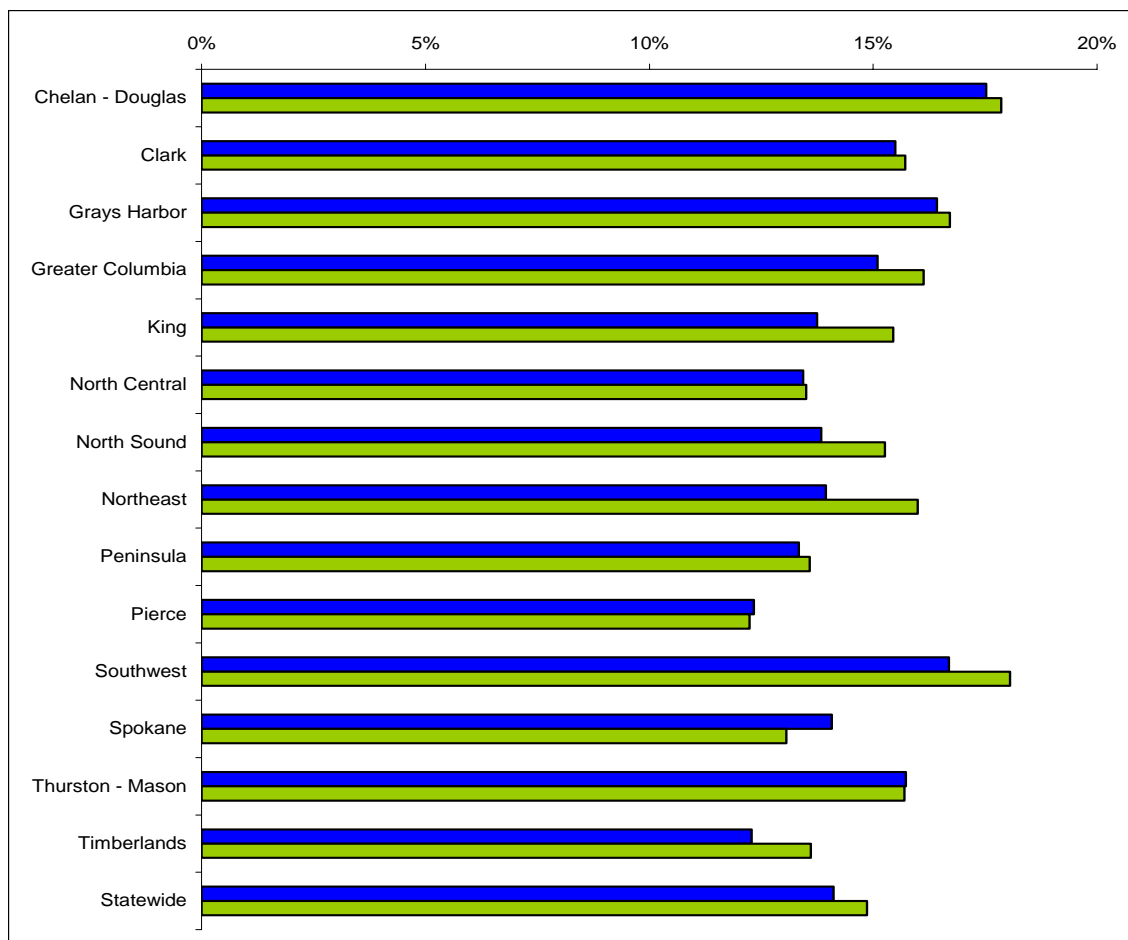

Clients who Received DASA & MHD Services by Age - Youth (0-17 yrs)
